LOCHAN GOWDA T M

Bengaluru, India | 10lochangowda@gmail.com | lochangowda10.github.io | github.com/lochangowda10 | linkedin.com/in/lochangowda10

SUMMARY

AI & Data Science undergraduate (CGPA 9.55/10) building LLM-powered apps, ML pipelines and full-stack products. 12+ hackathons in first year; BMSCE Datathon winner as team lead. Seeking AI/ML and software engineering internships.

EDUCATION

BMS College of Engineering — Bengaluru, India
Bachelor of Technology in Artificial Intelligence and Data Science; CGPA: 9.55/10 (2 semesters) — 2025 – 2029 (Expected)

PROJECTS

NammaSignal: Road Flood Hazard Intelligence | Solo, WeMakeDevs Bharat Builds Tour — Sep 2026
FastAPI, AWS Strands Agents, AWS Cedar, SQLite, Docker · github.com/lochangowda10/NammaSignal

- Built a Bengaluru road-hazard feed that fuses rain-sensor data, traffic-police advisories, civic complaints and citizen reports into time-decayed, confidence-scored alerts, with 41 tests including adversarial cases.

nostro: AI Finance Reconciliation Engine | Solo, Razorpay /buildathon — Aug 2026
Python, Gemini API, pytest, GitHub Actions, Docker · github.com/lochangowda10/nostro

- Built a reconciliation engine matching merchant books, payment-processor settlements and bank statements: deterministic rules close what they can prove, and an LLM only proposes explanations for the residual.
- Added a verifier that re-derives every amount the LLM proposes before a batch closes, reaching **100% precision with 0 false matches** across 5 seeded datasets of 1,000 orders and rejecting 87 incorrect model explanations.
- Raised batch closure from 60.7% (rules only) to 73.0% with a real model; 52 tests with CI on Python 3.11–3.13.

LaunchLoop AI: Live Positioning Experiments | Solo, THE HIVE × ApplyBee AI Hackathon — Aug 2026
Next.js, TypeScript, Neon PostgreSQL, OpenAI SDK, GitHub API, Vercel · applybee.vercel.app

- Built an app that turns a repo, product URL or one-line description into two opposing positioning pitches, deploys both as live landing pages and A/B tests them on real visitors.
- Migrated SQLite to Neon serverless PostgreSQL for production and handled GitHub API rate limits; verified with a 6/6 end-to-end harness, and the demo experiment measured 36.4% vs 20.0% click-through.

NAVIA: Multi-Agent Swing Trading Copilot | Team of 3, AMD Developer Hackathon — Jul 2026
Next.js, React, Framer Motion, FastAPI, LangChain, Supabase · navia-ai.vercel.app

- Designed and built the 3D interface and frontend for an agentic trading copilot (40 of the team's 48 commits).
- Designed the agent workflow in which technical, fundamental and risk agents must agree before a signal is issued; explored private, local inference on AMD Ryzen AI hardware.

DataVerse: Bengaluru House Price Prediction | Team Lead, Winner of BMSCE Datathon — May 2026
scikit-learn, XGBoost, pandas, Streamlit, Plotly · github.com/lochangowda10/DataVerse

- Led the team to first place: set an interpretable linear baseline (R^2 60.87%) with IQR outlier filtering, then moved to a stacked ensemble (XGBoost, HistGradientBoosting, Random Forest into a Ridge meta-model) optimised for RMSLE.
- Engineered a Haversine distance-to-metro feature and shipped the model as an interactive Streamlit app.

More (12 others): AquaStream AI (Google Solution Challenge 2026), AegisRoute (self-healing gateway for AI agents), LogicLens AI, FlowCode AI, BentoPulse. See lochangowda10.github.io.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C, Java, HTML, CSS

AI / ML: LLM APIs (OpenAI, Gemini, Groq), Multi-agent systems, LangChain, AWS Strands Agents, Amazon Bedrock, Ollama, scikit-learn, XGBoost, pandas, NumPy

Web & Backend: React, Next.js, Tailwind CSS, Framer Motion, FastAPI, REST APIs, Streamlit

Cloud & Data: Vercel, Google Cloud Run, Render, Docker, PostgreSQL (Neon, Supabase), SQLite

Tools: Git, GitHub, GitHub Actions, pytest, Claude Code

ACHIEVEMENTS & LEADERSHIP

- **Winner, BMSCE Datathon (2026):** led the team to first place with a stacked-ensemble price model.
- **Tech Lead, Beyond Academics, BMSCE:** core team of a peer-to-peer coding community for first-years; built its site.
- **12+ hackathons in first year,** including Google Solution Challenge 2026, AMD Slingshot 2026, AMD Developer Hackathon and Razorpay /buildathon; AMD Ryzen AI Slingshot Ideathon at REVA University.
